

Comissioners:

I would like to voice my opinion on the restricting of wideband signals on teh 160Meter amatuer band. I feel that the encroachment of the wideband activity on the CW portion will creat us great harm. There is much spectrum in the "voice/data" portion of the band that is void of use. From my receiving loaction, in Atlanta, Georgia, I see less than 10% of the voicve/data spectrum in use at any time. I therefore request that you highly consider maintaining the narrrow band/CW activity area at or below 1843 KHZ.
